Module overview

3. Semester (WiSe) 1. Semester (WiSe) 2. Semester (SoSe) Introduction to wind turbine aerodynamics Scientific and technical writing - Machinery components - FE & Fatique Analysis Project: Development of a wind turbine - 2 Electives Global Wind industry and environmental Certification, load assumptions and conditions simulations Control and automation of wind power Wind farm project management and GIS - Electrical machines and power plants electronics Grid integration Project: Development of a wind turbine Tower and rotor structures Advanced engineering mathematics 2 Electives Mechanical drive train Elective A - Structure - Rotor Blades - and Civil Engineering - FE & Fatique Analysis Project: Development of a wind Elective B Electrical engineering for wind turbines 2 Electives 4. Semester (SoSe) Thesis

Electives

1. Semester (WiSe)

Mechanical engineering for electrical engineers (Julius Kruse)

Electrical engineering for mechanical engineers (Sahner)

German for foreign students (Kähler)

English for engineers (Ward)

Energy economics (Hartmann)

Wind Energy Challenge Project (Faber, Mommsen)

Green Entrepreneurship (Neumann)

3. Semester (WiSe)

Advanced Wind Farm Planning (van Radecke)

Offshore Wind Energy: Operation and Maintenance (Birk)

Computational Fluid Dynamics (Schaffarczyk)

Modelling & Simulation of Wind Turbines (Jauch)

Turbine Measurements (Ibsch)

Controller Design for Wind Turbines and Wind Farms (Schlipf)

Wind Energy Challenge Project (Faber, Mommsen)

Green Entrepreneurship (Neumann)

Module number [1]: Scientific and Technical Writing

Course	Master of Science – Wind Engineering
Module name	Scientific and Technical Writing
Abbreviation (if applicable)	
Subtitle (if applicable)	
Seminar (if applicable)	
Semester	Winter semester
Person in charge of module	Dr. Simon Fietze, University of Southern Denmark
Lecturer/s	Dr. Simon Fietze, University of Southern Denmark
Status within the curriculum	Master Course Wind Engineering
	mandatory course
Language	English
Type of course and hours per week	2 h lectures, 2 h writing laboratory
Student workload	attendance: 60 h
	private study: 90 h
Credit points	5 ECTS
Preconditions according to examination regulations	English language skills according to admission requirements
Aims of the module,	By the end of the module, the students will be able to:
acquired skills	 write academic texts using technical vocabulary
	 structure academic texts writing concise sentences
	define research questions
	 employ paraphrase and summary
	employ quotation and a correct citation style
	 gain the knowledge of drafting, revising and editing academic texts
	evaluate sources for relevance and reliability
	 identify effective writing techniques in his or her own work and in peer writing
	avoid plagiarism
	 present scientific results in an appropriate way
Subjects covered	Formats for scientific and technical writing
Subjects covered	Structuring scientific papers and texts, especially paragraph
	structure (topic sentence, supporting example, transition
	sentence)
	Effective introductions, summaries and paraphrase
	Effective use of quotation and various citation styles
	Writing process (pre-writing, writing, re-writing)
	Reading and responding to assigned readingsGiving peer-feedback to fellow writers
	Presentation of scientific results
Form of examination	
Media used	Written report Powerpoint presentation, Studip
	Powerpoint presentation, StudIP
Recommended literature	Bailey, S. (2011). Academic Writing: A Handbook for International Students. Third Edition Lendon (New York).
	International Students. Third Edition. London/New York:
	Routledge.

Module number [2]: Global Wind industry and environmental conditions

Course	Master of Science – Wind Engineering
Module name	Global Wind industry and environmental conditions
Abbreviation (if applicable)	
Subtitle (if applicable)	
Seminar (if applicable)	
Semester	Winter semester
Person in charge of module	Dr. rer. nat. Hermann van Radecke, University of applied sciences
Terson in charge of module	Flensburg
	Prof. h.c. Dr. Klaus Rave, University of applied sciences Flensburg
Lecturer/s	Dr. rer. nat. Hermann van Radecke, University of applied sciences
Lecturerys	Flensburg
	Prof. h.c. Dr. Klaus Rave, University of applied sciences Flensburg
	et. al.
Status within the curriculum	Master Course Wind Engineering
Status within the Curriculum	mandatory course
Language	English
Language Type of source and hours	4 h lectures with exercises
Type of course and hours per week	
Student workload	attendance: 60 h
	private study: 90 h
Credit points	5 ECTS
Preconditions according to	None
examination regulations	
Aims of the module,	This course gives an overview of global wind energy networks
acquired skills	and standard energy and environmental calculations of wind
	parks.
	It provides an insight into the actual state of the global wind
	energy market with global institutions, organisations, networks
	and associations. Students will learn about the different
	regulatory regimes and their effects on the wind industry. The
	influence of policy making and the implementation of policies
	are outlined.
	It deals with the financing of wind farms, the bankability of
	projects and the strategies for project development.
	An analysis of the relationship between R&D, legislation,
	different climates and onshore and offshore installations will
	provide students with valuable experience for future careers.
	The students learn the fundamentals of energy meteorology
	and through study of the impact of wind energy plants on the
	environment gain knowledge of types and levels of emissions.
	They will understand and be able to calculate the physical,
	technical and legal aspects of wind energy parks with regard to
	their energy production and emissions within the frame of site
	assessment.
Subjects covered	Overview of the global wind industry
,	The onshore and offshore markets, general trends
	Energy policies and regulatory frameworks
	Global drivers of the markets
	- Global alivers of the markets

Form of examination	 Finance, bankability, project developments Energy meteorology, wind systems, boundary layers, profile, turbulence, WAsP, mesoscale models, wind atlas, technical directives, short and long-term measurement Emissions and influences on the environment, noise measurement and calculation, shadow, turbulence, optical impact, IEC standards Calculation of energy and emissions (Program modules Windpro, Windfarmer, WAsP, et al.) Written examination (120 min)
Media used	black board, power point presentation,
Recommended literature	 Manwell, J. F., McGowan, J. G., Rogers, A. L.: Wind Energy Explained. Wiley, Chichester, 2009 Troen, I. and E. L. Petersen: European Wind Atlas. Risø National Laboratory, Roskilde, 1989 CEwind, Hrsg.: Einführung in die Windenergietechnik. Carl Hanser Verlag, München, 2012 CEwind, ed.: Understanding Wind Energy Technology. Wiley, 2014 i.p. IEC 61400 International Electrotechnical Commission Technische Richtlinien (FGW-Richtlinien) Manuals programs WindPRO and Windfarmer

Module number [3]: Wind farm project management and GIS

Course	Master of Science – Wind Engineering
	7 7
Module name	Wind farm project management and GIS
Abbreviation (if applicable)	
Subtitle (if applicable)	NAC and a constraint and a constraint and a constraint
Seminar (if applicable)	Wind energy project management and planning
Semester	Winter semester
Person in charge of module	Prof. Dr. Bernd Möller, Europa-Universität Flensburg
Lecturer/s	Prof. Dr. Bernd Möller, Europa-Universität Flensburg
Status within the curriculum	Master Course Wind Engineering
	Mandatory course
Language	English
Type of course and hours	4 h lectures
per week	
Student workload	attendance: 60 h
	private study: 90 h
Credit points	5 ECTS
Preconditions according to	none
examination regulations	
Aims of the module,	Acquisition of general knowledge about all phases of developing
acquired skills	onshore wind energy projects, from the first idea of realisation,
	acquisition, business model, choice of location, infrastructural
	planning, approval planning and financing, to site management
	during building phase.
	The students learn about political, social, technical and legal
	aspects of wind energy planning and management
	The students gain practical skills of using geographical information
	systems for wind energy project management and planning.
Subjects covered	Wind energy planning and policy review
	Social acceptance and environmental aspects of wind energy
	 Legal characteristics of planning, implementation and operation
	Basic types of projects (greenfield, compression, repowering)
	 Identification of suitable areas and preliminary location analysis
	Assessing the local wind potential
	Financial analysis and feasibility studies
	Budget planning and calculation of profitability
	Urban and rural land-use planning
	, ,
	Seeking approval and preliminary planning Site was a second.
	Site management
	Introduction to the use of GIS software for engineers and planners
	Acquisition and application of geospatial data and information
Form of examination	Lab exercise portfolio
Media used	white board, power point presentation, beamer, Lab with ArcGIS and
	relevant geodata.
Recommended literature	Erich Hau: Wind Turbines – Fundamentals, Technologies,
	Applications, Economics. Springer, 2013 (German or English
	edition)

Module number [4]: Advanced Engineering Mathematics

Course	Master of Science – Wind Engineering
Module name	Advanced Engineering Mathematics
Abbreviation (if applicable)	AdvMath
Subtitle (if applicable)	
Seminar (if applicable)	
Semester	Winter semester
Person in charge of module	Prof. DrIng. David Schlipf, University of applied sciences Flensburg
Lecturer/s	Prof. DrIng. David Schlipf, University of applied sciences Flensburg
Status within the curriculum	Master Course Wind Engineering
	mandatory course
Language	English
Type of course and hours per week	4 h lectures
Student workload	attendance: 60 h
	private study: 90 h
Credit points	5 ECTS
Preconditions according to	Sound Knowledge of undergraduate Mathematic
examination regulations	
Aims of the module,	The students will be introduced into the classical methods of
acquired skills	advanced engineering calculus.
	Besides learning classical methods of advanced engineering
	calculus the students will also be able to apply the methods to wind energy applications
Subjects covered	Ordinary Differential Equations (ODEs)
	Linear Algebra. Vector Calculus
	Fourier Analysis. Partial Differential Equations (PDEs)
	Complex Analysis
	Numeric Analysis
	Optimization, Graphs
	Probability, Statistics
Form of examination	Written examination (120 min)
Media used	black board
Recommended literature	E. Kreyszig, Advanced Engineering Mathematics, 10th Ed, J.
	Wiley and Sons, 2011, ISBN 978-0-470-64613-7
L	

Module number [5]: Mechanical Engineering for Electrical Engineers

Course	Master of Science – Wind Engineering
Module name	Mechanical Engineering for Electrical Engineers
Abbreviation (if applicable)	
Subtitle (if applicable)	
Seminar (if applicable)	
Semester	Winter semester
Person in charge of module	Dr. rer. nat. Hermann van Radecke, University of applied sciences
	Flensburg
Lecturer/s	Dr. rer. nat. Hermann van Radecke, University of applied sciences
	Flensburg
	Julius Kruse, University of applied sciences Flensburg
Status within the	Master Course Wind Engineering
curriculum	mandatory course
Language	English
Type of course and hours	4 h lectures with practical exercises
per week	
Student workload	attendance: 60 h
	private study: 90 h
Credit points	5 ECTS
Preconditions according to	none
examination regulations	
Aims of the module,	This course provides a bridging opportunity for students who
acquired skills	have completed a Bachelor of Science
	(Electrical/Electrotechnical Engineering).
	Goal: To prepare students to utilize FEM-based computational
	tools.
	• First, the students are introduced to basic mechanics concepts:
	applied loads (forces, bending moments and torques), the
	resulting internal loads and the generation of stresses. Point loads, uniformly distributed loads and parabolic load
	distributions will be analysed.
	 This forms the foundation for the development of simple
	models which can be analysed using FEA techniques e.g. beams
	in bending must have at least 3 layers of elements: the neutral
	layer, one in tension, one in compression.
	 In this manner, students will be prepared for laboratory
	experiments with FEM software in the computer lab.
	experiments with relivisortware in the computer lab.
Subjects covered	Introduction: The finite element method, types of finite
	elements and what they can calculate, a motivation of what the
	students have to learn.
	 Axioms, principles and sign conventions in mechanics.
	Statics: Resolution of forces, static equilibrium systems,
	calculation of support reactions.
	 Mechanics of Materials: Mechanical stress, Hooke's law, normal
	and shear stresses, axial loads and torsion.
	Strength calculation: The voltage analogue; comparison of
	voltage manipulation with the determination of stresses due to
	voltage manipalation with the acterimilation of stresses due to

	 tension/compression, bending and torsion of prismatic straight bars. Kinematics and Kinetics of (a) point masses and (b) rigid bodies in pure rotation. Beam model, concentrated and distributed loads, shear force, bending moment and torque curves. Application to the modelling of FEM systems.
Form of examination	Written examination (120 min)
Media used	Whiteboard, PC and video projector, e-learning platform, in-class experiments, numerical simulations, lecture notes, drilled exercises
Recommended literature	 Beer, F., Johnston, E.R., deWolf, J., Mazurek, D: Mechanics of Materials. McGraw Hill, 6th edition, 2011 Gere, J.M., Goodno, B.J.: Mechanics of Materials, CEngage Learning, 8th edition, 2012 Popov, E.: Engineering Mechanics of Solids.", Prentice Hall, 2nd edition, 1998 Buchanan, G.: Mechanics of Materials. HRW.

Module number [6]: Electrical Engineering for Mechanical Engineers

Course	Master of Science – Wind Engineering
Module name	Electrical Engineering for Mechanical Engineers
Abbreviation (if applicable)	EE for ME
Subtitle (if applicable)	
Seminar (if applicable)	
Semester	Winter semester
Person in charge of module	Prof. DrIng. Peter Sahner, University of applied sciences Flensburg
Lecturer/s	Prof. DrIng. Peter Sahner, University of applied sciences Flensburg
Status within the curriculum	Master Course Wind Engineering
	mandatory course
Language	English
Type of course and hours per week	4 h lectures
Student workload	attendance: 60 h
	private study: 90 h
Credit points	5 ECTS
Preconditions according to	Bachelor degree in an engineering discipline or in physics
examination regulations	
Aims of the module, acquired skills	 The course allows the students to understand the basics of electrical engineering
	They are able to apply the learned basics to observed electrical phenomena
Subjects covered	Ohm's law
	Kirchhoff's law
	DC circuit: current in resistor, current in inductor, voltage at
	capacitor
	AC circuits: calculation of steady states in AC circuits using
	complex number calculation
	Electric and magnetic field
Form of examination	Written examination (120 min)
Media used	black board, power point presentation, internet
Recommended literature	Ose, R., Elektrotechnik für Ingenieure, Fachbuchverlag Leipzig
	Zastrow, D.; Elektrotechnik, Vieweg, Braunschweig
	Weisgerber, W.;Elektrotechnik für Ingenieuere Bd. 1 +
	2,Vieweg, Braunschweig

Module number [7]: German for foreign students

Course	Master of Science – Wind Engineering
Module name	German for foreign students
Abbreviation (if applicable)	
Subtitle (if applicable)	Basic knowledge of German language
Seminar (if applicable)	German for foreigners
Semester	Winter semester
Person in charge of module	Sybille Kähler, University of applied sciences Flensburg
Lecturer/s	Sybille Kähler, University of applied sciences Flensburg
Status within the curriculum	Master Course Wind Engineering
	elective course
Language	German
Type of course and hours	4 h lectures
per week	
Student workload	attendance: 60 h
	private study: 90 h
Credit points	SECTS
Preconditions according to	none
examination regulations	
Aims of the module,	basic language skills corresponding to A1 (breakthrough or
acquired skills	beginner) or A2 (waystage or elementary) of the Common
	European Framework of Reference for Languages (CEF)
	depending on the students' preknowledge
Subjects covered	A1: after completion of this course students can
	- understand and use familiar everyday expressions and
	very
	basic phrases related to particular concrete situations
	- introduce themselves and others
	- ask and answer questions about personal details
	- interact in a simple way
	A2: after completion of this course students can:
	- understand and use sentences and frequently used
	expressions related to areas of most immediate relevance
	- communicate in simple and routine tasks
	- exchange information on familiar and routine matters
	- describe in simple terms aspects of their background,
	immediate environment and matters in areas of
	immediate
	need
Form of examination	Oral and written examination (90 min.)
Media used	white board, beamer, hand-outs
Recommended literature	Krenn, W., Puchta, H.: Motive A1: Kompaktkurs DaF. Deutsch
	als Fremdsprache. Hueber Verlag, München.
	Krenn, W., Puchta, H.: Motive A2: Kompaktkurs DaF. Deutsch
	als Fremdsprache. Hueber Verlag, München.
	als Fremaspiaene. Haeser veriag, wantenen.

Module number [8]: English for engineers

Course	Master of Science – Wind Engineering
Module name	English for engineers
Abbreviation (if applicable)	ENGL
Subtitle (if applicable)	
Seminar (if applicable)	
Semester	Winter semester
Person in charge of module	John Ward, University of applied sciences Flensburg
Lecturer/s	John Ward, University of applied sciences Flensburg
Status within the curriculum	Master Course Wind Engineering
	elective course
Language	English
Type of course and hours per week	4 h lectures
Student workload	attendance: 60 h
Student Workload	private study: 90 h
Credit points	5 ECTS
Preconditions according to	none
examination regulations	Hone
Aims of the module,	Students have the general and specialized language
acquired skills	foundations for the formulation of scientific and technical
	matters.
	Students are particularly aware of collocations and linguistic
	twists and know typical verb-noun and adjective-noun
	combinations which are used in technical communication
Subjects covered	Controlled formulating
_	Exercises for easy and accurate conversion of facts into
	language.
	Basic technical terms and their linguistic description in
	definitions: circuit, conductance, conductivity, efficiency,
	machine, magnitude, resistance, resistor, power, quantity,
	speed, switch, velocity,)
	Technical communication: complaints, damage reports,
	technical reports, invitation to seminar,
	Treatment of selected topics: disturbance and errors; velocity;
	modernization; naming and defining, building, design and
	construction; the environment; quality;
Form of examination	Written Examination (120 min)
Media used	black board, power point presentation, internet
Recommended literature	Bonamy, D.: Technical English 3. Pearson Longman, 2011
	ISBN: 978-1-4082-2947-7

Module number [9]: Energy Economics

Course	Master of Science – Wind Engineering
Module name	Energy Economics
Abbreviation (if applicable)	EE
Subtitle (if applicable)	
Seminar (if applicable)	
Semester	Winter semester
Person in charge of module	Dr. Claus Hartmann, Stadtwerke Flensburg
Lecturer/s	Dr. Claus Hartmann, Stadtwerke Flensburg
Status within the curriculum	Master Course Wind Engineering
	elective course
Language	English
Type of course and hours	4 h lectures
per week	
Student workload	attendance: 60 h
	private study: 90 h
Credit points	5 ECTS
Preconditions according to examination regulations	Admission to the M.Sc. Wind Engineering
Aims of the module,	Students are introduced to the fundamental problems and the
acquired skills	overall contexts of the economics of energy.
	Students will learn about the different parts of energy demand
	and the different ways of energy supply.
	An understanding of the limitations of non-renewable energy
	sources and the difficulties of their substitution by renewable
	 and often intermittent energy sources is taught. The differences in the markets for grid-bound fuels are taught.
	 The differences in the markets for grid-bound fuels are taught. At the end of the seminar, each student is able to understand
	the basic relationships of the various energy markets and
	classify the contribution of different energy sources, fuels and
	technologies in the context of the total energy system and
	sustainable development.
Subjects covered	Why is energy a subject of economics?
	Energy as a resource;
	Energy consumption and sustainable development;
	 Energy and the environment; Social costs of energy;
	General aspects of energy markets; Prices in energy markets;
	The coal market; The crude oil market; The natural gas market;
	The electricity market; The market for district heating;
	Energy demand by sector; Industry, Households, Commercial
	sector, Transport,
	Potentials, costs and limits of renewable energy sources,
	Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity, Solar energy for low temperature Solar energy for electricity for
	heat, Wind energy, Energy from biomass, Hydropower,
	Geothermal energy, Wave and tidal energy,
	 Potentials, costs and limits of the rational use of energy by sector, Industry, Households, Commercial Sector, Transport,
	 Scenarios of sustainable long term energy systems
	- Section to sustainable folig term energy systems

Form of examination	Presentation of the different teams and a final written report by each team
Media used	Group work and lectures with projector based presentations
Recommended literature	 Hensing, I. et.al. (1998): Energiewirtschaft. Einführung in Theorie und Politik. R. Oldenbourg Verlag, München. Banks, Ferdinand B.: Energy Economics: A Modern Introduction. Kluewer Academic Publishers, Boston BP (see most recent year): World Energy Report. Internet Bundesministerium für Wirtschaft und Arbeit (see most recent year): Energie Daten 201x. Module number [10]: Introduction to Wind Turbine Aerodynamics

Course	Master of Science – Wind Engineering		
Module name	Introduction to Windturbine Aerodynamics		
Abbreviation (if applicable)	IntroAero		
Subtitle (if applicable)	Basic knowledge of Wind Turbine Aerodynamics		
Seminar (if applicable)	· · · · · · · · · · · · · · · · · · ·		
Semester	Summer semester		
Person in charge of module	Prof. Dr. Alois Peter Schaffarczyk, University of applied sciences Kiel		
Lecturer/s	Prof. Dr. Alois Peter Schaffarczyk, University of applied sciences Kiel		
	Prof. DrIng. David Schlipf, University of applied sciences Flensburg		
Status within the curriculum	Master Course Wind Engineering		
	mandatory course		
Language	English		
Type of course and hours	4 h lectures		
per week			
Student workload	attendance: 60 h		
	private study: 90 h		
Credit points	5 ECTS		
Preconditions according to	Sound Knowledge of undergraduate Mathematic		
examination regulations			
Aims of the module,	Introduction into the classical methods of low-speed		
acquired skills	aerodynamics and blade-element and momentum theory.		
	Students then are able to understand and use standard BEM		
Cubicate acused	Codes I		
Subjects covered	Integral and differential methods of fluid dynamics All fails		
	2D Airfoils Simple Management the agree of Wind Tumbing. The Beta Limit		
	Simple Momentum-theory of Wind-Turbine, The Betz Limit Compared Management Theory		
	General Momentum Theory Marten Theory of Milad Turking		
	Vortex-Theory of Wind-Turbine		
	The Blade Element Momentum Theory The Blade Element Momentum Theory		
5	Outlook: Computational Fluid Dynamics		
Form of examination	Written Examination (120 min)		
Media used	black board, power point presentation, internet		
Recommended literature	A. P. Schaffarczyk, Introduction to Wind Turbine Aerodynamics, Seria and Verlage, 2014, ISBN 070-2-364000-2-36400-2-364000-2-

curriculum	mandatory course		
Language	English		
Type of course and hours	2 h lectures,		
per week	2 h exercises		
Student workload	attendance: 60 h		
	private study: 90 h		
Credit points	5 ECTS		
Preconditions according to	General knowledge in undergraduate mechanics, general ability to		
examination regulations	use computers, basic experience in the use of engineering software		
Aims of the module,	Knowledge and understanding of general items about loads,		
acquired skills	standards and guidelines, type and project certification		
	Possibility to connect this knowledge about loads and		
	certification with practical background of the person who is		
	teaching this course		
	Introduction to load simulation for wind turbines.		
	The students will understand and learn about the design		
	processes of wind turbines. They will be able to understand the		
	importance of dynamic load simulations for wind turbines and		
Cubicate	can calculate different load cases.		
Subjects covered	General Items		
	Extreme and fatigue load calculations		
	Standards and Guidelines		
	Type Certification:		
	o Numbering systems		
	o Certification Report		
	o Statement of Compliance		
	o Type Certificate:		
	Design AssessmentQuality Management		
	- Quality Management		
	- Prototype Testing		
	Project Certification:		
	o Site Assessment o Site Specific Design Assessment o Manufacturing Surveillance		

	 Surveillance of Transport, Installation and Commissioning Physics and Aerodynamic Principles Guidelines and Standards Wind Turbine Design Process Load Case Definitions Turbine Design Load case simulation Extreme Loads (for Example DLC 1.3) Fatigue Loads
Form of examination	Written Examination (120 min) or Oral examination (depending on the number of students)
Media used	black board, power point presentation, projector, PC

Credit points	5ECTS .
Preconditions according to	general knowledge of undergraduate mathematics, general
examination regulations	knowledge of automation and control, general knowledge of
	electrical drives and power electronics, admission to the M.Sc. in
	Wind Engineering
Aims of the module,	The students know and understand the control systems for pitch,
acquired skills	azimuth, speed and power adjustment, the automation as well as
·	the possibilities of process control, remote control and
	maintenance systems.
	They can layout and optimize the subsystems. They can judge,
	which can be fulfilled tasks in which automation level and with
	which characteristics.
Subjects covered	Introduction: defining control systems and automation, basics in
	wind energy conversion systems, their definition and standards
	Feedback control systems: objectives and strategies, system
	description, application to motion control systems
	Feedback control in wind energy conversion systems: overview,
	generator systems, yaw-, pitch-, rotor-power- and speed-control,
	dc-voltage-control and electrical power control
	Process management: open loop control, operating states,
	supervisory control, grid integration management,
	communication systems
	·
Form of overmination	Summary Oral or written examination (120 min)
Form of examination	Oral or written examination (120 min)
Media used	Blackboard, overhead, beamer, internet
Recommended literature	 Heier, Siegfried: Grid Integration of WECS, John Wiley & Sons, 2008

Module number [13]: Tower and rotor structures

Course	Master of Science – Wind Engineering		
Module name	Tower and rotor structures		
Abbreviation (if applicable)	ToRo		
Subtitle (if applicable)	Basic knowledge about towers and rotor blades of wind turbines		
Seminar (if applicable)			
Semester	Summer semester		
Person in charge of module	Prof. DrIng. Torsten Faber, University of applied sciences		
	Flensburg		
	Prof. Dr. Alois Peter Schaffarczyk, University of applied sciences Kiel		
Lecturer/s	Prof. DrIng. Torsten Faber, University of applied sciences		
	Flensburg		
	Prof. Dr. Alois Peter Schaffarczyk, University of applied sciences Kiel		
Status within the curriculum	Master Course Wind Engineering		
	mandatory course		
Language	English		
Type of course and hours	2 h lectures,		
per week	2 h exercises		
Student workload	attendance: 60 h		
	private study: 90 h		
Credit points	5 ECTS		
Preconditions according to	none		
examination regulations			
Aims of the module,	Knowledge and understanding of general items about		
acquired skills	structures of towers and rotorblades		
	Possibility to connect this knowledge about loads and		
	certification with practical background of the person who is		
	teaching this course		
Subjects covered	General items		
	Relevant standards & materials used		
	Tower and rotor types		
	Safety Concept and design calculation		
	Detail calculations		
	Modal Analysis		
Form of examination	Written examination (120 min) and Oral examination (depending		
	on the number of students)		
Media used	black board, power point presentation, beamer		
Recommended literature	Understanding Wind Energy Technology, Wiley, 2014		
	(expected)		
	Guideline for the Certification of Wind Turbines On- and		
	Offshore		
	DIBt Regulations		

Module number [14]: Mechanical drive train

Course	Master of Science – Wind Engineering
Module name	Mechanical drive train
Abbreviation (if applicable)	MDT
Subtitle (if applicable)	
Seminar (if applicable)	
Semester	Summer semester
Person in charge of module	Prof. DiplIng. P. Quell, University of applied sciences Kiel
Lecturer/s	Prof. DiplIng. P. Quell, University of applied sciences Kiel
Status within the curriculum	Master Course Wind Engineering
	mandatory course
Language	English
Type of course and hours	4 h lectures / exercises
per week	
Student workload	attendance: 60 h
	private study: 90 h
Credit points	5 ECTS
Preconditions according to	none
examination regulations	
Aims of the module,	The students have a profound knowledge of the general set-up,
acquired skills	tasks and functionalities of wind turbine drive trains and their
	components.
	They do understand the technological and economical aspects of
	different solutions and are able to select preferred technical
	concepts for given conditions and demands.
	The students are able to describe the operational und
	environmental conditions and their impact on the wind turbine
	drive trains.
	They know the methods and processes of calculating and
	designing the main components and to integrate them in the
	drive train system.
	The students do understand the operation and maintenance
	requirements and the applied processes to achieve a successful
	and economical efficient operation throughout the whole life-
	cycle.
	In parallel they know how to analyze and solve specific tasks and
	assignments given to them within a team. They know how to
	present their results effectively and convincingly.
Subjects covered	Tasks and functionalities of wind turbine drive trains
	Variants, technology and economics of drive trains
	Design of gearboxes
	Geared and directly driven generators
	Rotor bearing solutions
	Rotor shafts and joins
	Couplings, brakes, shaft-hub-joints
	Operation and maintenance
Form of examination	Assignments with presentation and written examination (90 min.)
Media used	Blackboard, beamer,

Recommended literature	 Germanischer Lloyd (GL): Guideline for the Certification of Wind Turbines, 2010 EN 61400-1: Design Requirements for Wind Turbines, 2011 Schaffarczyk, A.: Introduction to Wind Energy Technology, 2013, Wiley
	 Gasch, R.: Wind Power Plants, 2011, Springer-Verlag Hau, E.: Wind Turbines, Springer-Verlag, 2013

Module number [15]: Electrical engineering for wind turbines

Course	Master of Science – Wind Engineering			
Module name	Electrical engineering for wind turbines			
Abbreviation (if applicable)	EE for WT			
Subtitle (if applicable)				
Seminar (if applicable)				
Semester	Summer semester			
Person in charge of module	Prof. Dr. Rajesh Saiju, University of applied sciences Flensburg			
Lecturer/s	Prof. Dr. Rajesh Saiju, University of applied sciences Flensburg			
Status within the curriculum	Master Course Wind Engineering			
	mandatory course			
Language	English			
Type of course and hours	4 h lectures			
per week				
Student workload	attendance: 60 h			
	private study: 90 h			
Credit points	5 ECTS			
Preconditions according to	Bachelor degree in an electrical engineering biased discipline, or			
examination regulations	successful completion of Module "Electrical engineering for			
-	mechanical engineers"			
Aims of the module,	Understanding the electrical issues related to wind turbines			
acquired skills	Getting to know the electrical components of a wind turbine			
	power plant			
Subjects covered	Basics application of electric machines and power electronics			
•	used in wind turbines: generators, transformers, motors,			
	rectifiers, frequency converters, softstarters in power circuit			
	and in auxiliary equipment			
	Pitch and yaw systems			
	Cables of different voltage levels and for different purposes in			
	wind turbines and wind parks			
	Switch gear (contactors, circuit breakers, fuses, relays)			
	Safety issues in electric installations			
	Lightning protection in wind turbines			
	Controller hardware, communication systems and other			
	microelectronics used in wind turbines			
	Condition monitoring			
	Reading and understanding wiring diagrams			
Form of examination	Written examination (120 min)			
Media used	black board, power point presentation,			
Recommended literature	Burton, T. et al.: "Wind Energy Handbook", 2 nd Ed., Wiley, Mai 2011			
	Ackermann, T.: "Wind Power in Power Systems", Wiley-Blackwell,			
	Mai 2012			
	Stiebler, M.: "Wind Energy Systems for Electric Power Generation:

Module number [16]: FE & Fatique Analysis

Course	Master of Science – Wind Engineering		
Module name	FE & Fatique Analysis		
Abbreviation (if applicable)	FFA		
Subtitle (if applicable)			
Seminar (if applicable)			
Semester	Winter semester		
Person in charge of module	Rainer Osthorst, aerodyn Energiesysteme GmbH		
	Ulf Karnath, k2 E + C GmbH		
Lecturer/s	Rainer Osthorst, aerodyn Energiesysteme GmbH		
	Ulf Karnath, k2 E + C GmbH		
Status within the curriculum	Master Course Wind Engineering		
	mandatory-optional course		
Language	English		
Type of course and hours	2 h lectures		
per week	2 h exercises		
Student workload	attendance: 60 h		
	private study: 90 h		
Credit points	5 ECTS		
Preconditions according to	none		
examination regulations			
Aims of the module,	basic use of ANSYS Workbench		
acquired skills	performing a static linear FE Analysis		
	validation of mesh quality		
	validation of stress results		
	Using FKM guideline for fatigue analyses		
	Performing fatigue analyses of forged steel and cast iron for		
	wind turbine components		
Subjects covered	linear static analyses		
	influence of mesh quality at regions with high stress gradients		
	comparison of FEM stress results with stresses calculated with		
	analytical approach		
	 minimize stresses at hot spots by modifying local geometry definitions 		
	 calculation of stress concentration factor on the basis of FEM results 		
	introduction to fatigue analyses		
	calculation of synthetic SN curves according FKM guideline for		
	wind turbine rotor shaft		
	influences of size, mean stress, roughness and notches on SN		
	curves		
	using the safety factors of FKM and DNV GL guidelines		
	analysing the damage sum according to Plamgren/Miner and		
	safety margin or stress reserve factor		
	fatigue analyses of different materials like forged steel with		
	different strength and nodular cast iron		
Form of examination	documentation of FE Analysis of main shaft WEC "Optimus"		
Media used	black board, power point presentation, PC, beamer		

Recommended literature	•	FKM - Analytical Strength Assessment of Components Edition-6/2012, VDMA
	•	DNVGL-ST-0361-2016-09 - Machinery for wind turbines DNV GL Hamburg

Module number [17]: Machinery components

Course	Master of Science – Wind Engineering		
Module name	Machinery components		
Abbreviation (if applicable)			
Subtitle (if applicable)			
Seminar (if applicable)			
Semester	Winter semester		
Person in charge of module	Prof. Peter Quell, University of applied sciences		
Lecturer/s	Prof. DrIng. Michael Thiemke, University of applied sciences		
	Flensburg (1 SWS)		
	Falco Ingwersen (1 SWS)		
	Boy Dario Kraemer (1 SWS)		
	NN (1 SWS)		
Status within the curriculum	Master Course Wind Engineering		
	mandatory course		
Language	English		
Type of course and hours	4h lectures/practice		
per week			
Student workload	attendance: 36 h		
	private study: 114 h		
Credit points	5 ECTS		
Preconditions according to	none		
examination regulations			
Aims of the module,	The students learn how to calculate and to develop the		
acquired skills	machinery components of wind turbines:		
	- mechanical drive train		
	- gear boxes		
	 the stress distributions (normal and shear stresses) in different structures under combined loads 		
	 natural frequencies and vibrations of structures the life cycle behaviour of structures 		
	- calculation methods (analytical, numerical)		
	The students will be able, to calculate the stresses and safety		
	factors under dynamic wind loads in wind energy converters.		
	,		
	Students finally should be able to read relevant literature in this subject and understand the foundations of acro plastic sodes to		
	subject and understand the foundations of aero-elastic codes to a preliminary structural design of wind turbine blade		
Subjects covered	Basics of 1 and 2 DOF systems		
Subjects covered	Rotating reference systems		
	Dynamical equations in Lagrange's formulation		
	Natural frequencies, Campbell-Diagram		
	Life cycle calculation methods		
	Analytical calculation methods: beam theory, plates		
	Numerical calculation methods: General mathematical		
	simulation methods, FEM, condensation of FEM models, multi		
	body simulations		
Form of examination	Written examination (120 minutes)		
Media used	black board, power point presentation, PC, beamer		
ivicala asca	Siden Sourd, power point presentation, i.e., seamer

Module number [18]: Electrical machines, power electronics and control

Course	Master of Science – Wind Engineering
Module name	Electrical machines, power electronics and control
Abbreviation (if applicable)	
Subtitle (if applicable)	
Seminar (if applicable)	
Semester	Winter semester
Person in charge of module	Prof. Dr. Rajesh Saiju, University of applied sciences Flensburg
Lecturer/s	Prof. Dr. Rajesh Saiju, University of applied sciences Flensburg
Status within the curriculum	Master course Wind Engineering
	mandatory-optional course
Language	English
Type of course and hours	4 h lectures
per week	
Student workload	attendance: 60 h
	private study: 90 h
Credit points	5 ECTS
Preconditions according to	Basic knowledge in electrical engineering, especially electrical
examination regulations	energy
	engineering
Aims of the module,	To have basic knowledge on steady state performance of three
acquired skills	phase AC mains, induction generators, synchronous generators
	and power electronic converters for AC machines as used in
	wind power stations and be able to calculate their
	performance.
Subjects covered	Three phase AC mains
	Induction generators
	Synchronous generators
	Power electronic converters for AC machines
Form of examination	Written examination (120 min)
Media used	Black board, power point presentation, beamer
Recommended literature	• Schaffarczyk, J (Editor).: <i>Understanding Wind Power Technology</i>

Module number [19]: Grid Integration

Course	Master of Science – Wind Engineering,
Module name	Grid Integration
Abbreviation (if applicable)	GI
Subtitle (if applicable)	Mutual effects between wind turbines and power systems
Seminar (if applicable)	seminar
Semester	Winter semester
Person in charge of module	Prof. Dr. Clemens Jauch, University of applied sciences Flensburg
Lecturer/s	Prof. Dr. Clemens Jauch, University of applied sciences Flensburg
Status within the	Master Course Wind Engineering
curriculum	mandatory-optional course
Language	English
Type of course and hours	4 h lectures
per week	
Student workload	attendance: 60 h
	private study: 90 h
Credit points	5ECTS
Preconditions according to	none
examination regulations	
Aims of the module,	understanding the fundamental principles of power systems
acquired skills	understanding the behaviour of grid connected wind turbines
	understanding the effects grid connected wind turbines have
	on power systems
	understanding the effects transient and dynamic events in
	power systems have on wind turbines
Subjects covered	power system basics
	 basic characteristics and quantities
	o flicker
	 power system stability
	power system simulation
	wind farms in power systems
	 interactions between wind turbines and power systems
	 long term effects
	 feed-in management
	 inertial response
	o flicker
	 low voltage ride through and and other transient events
	harmonics
Form of examination	Written examination (120 minutes)
Media used	beamer based presentation, blackboard
Recommended literature	B.M. Weedy, B.J. Cory; Electric Power Systems; John Wiley
	S. Heier; Grid Integration of Wind Energy Conversion Systems;
	John Wiley & Sons

Module number [20]: Structures – Rotor blades – and Civil Engineering

Course	Master of Science – Wind Engineering
Module name	Structures – Rotor blades – and Civil Engineering
Abbreviation (if applicable)	3 3
Subtitle (if applicable)	In-depth knowledge about tower design and dimensioning
Seminar (if applicable)	
Semester	Winter semester
Person in charge of module	Prof. DrIng. Torsten Faber, University of applied sciences
	Flensburg
Lecturer/s	Prof. DrIng. Torsten Faber, University of applied sciences
	Flensburg
	Prof. Dr. Alois Peter Schaffarczyk, University of applied sciences Kiel
Status within the curriculum	Master Course Wind Engineering
	Mandatory-optional course
Language	English
Type of course and hours	2 h lectures,
per week	2 h exercises
Student workload	attendance: 60 h
	private study: 90 h
Credit points	5 ECTS
Preconditions according to	Certification and load assumptions
examination regulations	Tower and rotor structures
Aims of the module,	Students
acquired skills	 know to design, dimension and optimise the (sub-)structures of
	a wind turbine and tower in consideration of structural safety,
	serviceability and economic efficiency
	 know what materials can be used (steel, reinforced concrete,
	GRP, wood etc.)
	can evaluate what materials are applicable under specific
	conditions
Subjects covered	Design Calculation
,	Verification against Material Failure
	Verification against Stability Failure
	Verification against Fatigue Failure
	Verification of Serviceability
	Detail Calculation
	FEM Calculation
	Prevention of Resonance
	- Frevention of Resonance
	Internal resistance –
	Dimensioning of concrete and reinforcement steel
	External resistance –
	Assessment of soil, respective interaction between soil and
	foundation
	Dynamic behaviour –
	Validation of natural frequencies which were assumed within
	load calculation
Form of examination	Written examination (120 min) or Oral examination (depending on
. c.m or examination	the number of students)
	the hamber of students)

Media used	black board, power point presentation, beamer and FEM Lab
Recommended literature	Guideline for the Certification of Wind Turbines On- and Offshore
	DIBt Regulations
	Civil Engineering DIN-Standards
	Eurocodes for civil engineering

Module number [21]: Project: Development of a wind turbine

Course	Master of Science – Wind Engineering
Module name	Project: Development of a wind turbine
Abbreviation (if applicable)	P_WT
Subtitle (if applicable)	Focus:
	A Mechanical engineering
	B Electrical engineering
	C Structures
Seminar (if applicable)	project
Semester	Winter semester
Person in charge of module	Prof. Peter Quell, University of applied sciences Kiel
Lecturer/s	A) Prof. Dr. Alois Schaffarczyk, University of applied sciences Kiel
	B) Prof. Dr. Rajesh Saiju, University of applied sciences Flensburg
	C) Prof. Dr. Torsten Faber, University of applied sciences Flensburg
	D) DiplIng. Andreas Manjock, DNV-GL
	E) Prof. Peter Quell, University of applied sciences Kiel
Status within the curriculum	Master Course Wind Engineering
	Mandatory-optional course
Language	English
Type of course and hours per	3 h project discussion
week	17 h self-dependent project work
Student workload	attendance: 30 h
	private study: 270 h
Credit points	10 ECTS
Preconditions according to	none
examination regulations	
Aims of the module, acquired	Project work in an R&D process
skills	Identification of the components needed to build a wind turbine
	with the consideration of varying site conditions
	Dimensioning and designing the relevant mechanical, electrical or
	constructional components of a wind turbine (based on the team
	focus)
	Gaining in-depth knowledge about the current market situation of
	wind turbines
	Understanding the importance of interface management in a
	project and being able to implement interface management to any
	project
	Efficiently working and communicating an interdisciplinary team
Subjects covered	Project planning and project management
	Interdisciplinary project team work interacting between
	mechanics team, electrics team and structures team
	A • Conception of the mechanical drive train
	Designing the rotor bearing, gearbox, couplings and brakes
	Aerodynamical and structural design of the rotor blades
	B • Conception of the electrical system
	Dimensioning transformer, generator, converter and cable
	system for the wind turbine
	Conception of the control system
	C • Load simulation and calculation
L	

	 Conception of the tower and foundation Designing and dimensioning tower and foundation
Form of examination	Presentation and project report
Media used	-
Recommended literature	 Schaffarczyk, Alois: Understanding Wind Power Technology, Wiley, 2014, ISBN: 978-1118647516 Hau, Erich: Wind Turbines, Springer, 2013, ISBN: 978-3642271502 S. Heier; Grid Integration of Wind Energy Conversion Systems; John Wiley & Sons DNV-GL: Guideline for the Certification of Wind Turbines, 2010 DIN EN 61400: Wind turbines, 2010

Module number [22]: Advanced Wind Farm Planning

Course	Master of Science – Wind Engineering		
Module name	Advanced Wind Farm Planning		
Abbreviation (if applicable)	AWFP		
Subtitle (if applicable)			
Seminar (if applicable)			
Semester	Winter semester		
Person in charge of module	Dr. rer. nat. Hermann van Radecke, University of applied sciences		
	Flensburg		
Lecturer/s	Dr. rer. nat. Hermann van Radecke, University of applied sciences Flensburg		
Status within the curriculum	Master Course Wind Engineering elective course		
Language	English		
Type of course and hours	4 h practical laboratory exercises in a computer lab, attendance at		
per week	all minus one laboratory dates is mandatory, otherwise the claim for grading expires		
Student workload	Attendance: 60 h		
	Private study: 90 h		
Credit points	5 ECTS		
Preconditions according to	Basics in wind properties		
examination regulations	Basics in wind energy theory		
_	Basics in wind turbine systems		
Aims of the module, acquired skills	 In the first lecture (introduction) the computer capacity is distributed (no students attendance no claim to one of the limited computer workstations) and students will learn what they should have learned in their first and second semester of master wind engineering concerning wind and energy and if they have gaps what they have to learn by self-reliant learning, doing the exercises and asking the lecturer. Working in the computer lab the students will learn to use the most important wind park planning programs WASP and WindPRO. At predefined projects with extended lab manuals students are lead trough annual energy productions, the use of wind measurements done with the university own wind tower at the campus and its long term correction. A resource map is generated. Environmental impacts are considered by calculation of noise and shadow emission, visual impact and photomontage. The economy of the wind project is calculated. Possible are park optimization, electrical grid lay out and others if time is left. Finally, the students will be able to evaluate prognoses of windenergy potential. They will be able to calculate and evaluate emissions. 		
Subjects covered	 Energy meteorology, annual energy production calculations, met-tower, short-term long-term measurements, own and public wind resources, wake models, programs WindPRO, WAsP et al. e.g. Windfarmer Emissions and influences on the environment, noise, shadow, programs Windpro, (Windfarmer) et al. 		

	 Visual impact, visibility, photomontage, programs Windpro, (Windfarmer) et al. Electrical layout of windpark, programs Windpro, (Windfarmer) et al. Optimisation of a windpark layout, programs Windpro.
	(Windfarmer)
	Evaluation of economic efficiency of a windpark
Form of examination	Written Laboratory report
Media used	Computer lab, laboratory experiments, whiteboard, PC and video
	projector, e-learning platform, lecture notes, program manuals
	Power Point Presentations
Recommended literature	CEwind, ed. (2014): Understanding Wind Power Technology, Theory, Development and Optimization. Wiley Ltd., Chichester. Chapter 3, van Radecke et.al: Wind resources, site assessment, ecology.

	Manual program Windpro in the lab

Module number [23]: Offshore wind energy: Operation and Maintenance

Course	Master of Science – Wind Engineering		
Module name	Offshore wind energy: Operation and Maintenance		
Abbreviation (if applicable)	OWE; O&M		
Subtitle (if applicable)			
Seminar (if applicable)			
Semester	Winter semester		
Person in charge of module	DrIng. Axel Birk, Hanseatic Renewable Consulting GmbH		
Lecturer/s	DrIng. Axel Birk, Hanseatic Renewable Consulting GmbH		
Status within the	Master Course Wind Engineering		
curriculum	elective course		
Language	English		
Type of course and hours	4 h lectures		
per week	Threatares		
Student workload	attendance: 60 h		
Stadent Workload	private study: 90 h		
Credit points	5 ECTS		
Preconditions according to	none		
examination regulations	none		
Aims of the module,	The students have a profound knowledge of the general set up		
acquired skills	and the functionalities of offshore wind wind power plants		
acquired skins	(OWPP)		
	' '		
	They understand the market, the potential and the economics of office are using a party. They are able to calcut to be included.		
	of offshore wind energy. They are able to select technical		
	solutions based on a balanced evaluation of yield and costs.		
	The students are able to describe the operational und		
	environmental conditions offshore and their impact on the OWPP.		
	They know the different types of offshore foundations and are		
	able to select the best solution for given environmental		
	conditions.		
	The students are able to describe the logistical processes for		
	construction, transport, installation and servicing of OWPPs.		
	The Module will create general understanding to manage		
	processes to operate and maintain wind turbines		
	The competence to use planning methods for intervention		
	(scheduled and unscheduled) will be teached		
	The students will learn to create documentation and use life		
	cycle management techniques		
	· · · · · · · · · · · · · · · · · · ·		
Subjects covered	elements of O&M phase will be explained		
Subjects covered	Differences between onshore and offshore applications Offshore markets and potential.		
	Offshore markets and potential		
	Economics of offshore wind parks		
	Operational and environmental conditions offshore		
	Types of fixed foundations		
	Construction and installation of offshore WECs		
	 business process O&M (elements, interfaces) 		
	scheduled interventions (ressources, timing and cost)		

	 unscheduled intervention (ressources, timing and cost) Health and Safety Documentation needs for Life Cycle Management Spare part management for tear and wear parts or regular spares work instructions for O&M RDS-PP as tool to describe wind power plants 	
Form of examination	Oral examination	
Media used	Beamer based presentation

Module number [24]: Computational Fluid Dynamics

Course	Master of Science – Wind Engineering, elective	
Module name	Computational Fluid Dynamics	
Abbreviation (if applicable)	CFDLS	
Subtitle (if applicable)	Introduction to Computational Fluid Dynamics with OpenFOAM	
Seminar (if applicable)		
Semester	Winter semester	
Person in charge of module	Prof. Dr. Alois Peter Schaffarczyk, University of applied sciences Kiel	
Lecturer/s	Prof. Dr. Alois Peter Schaffarczyk, University of applied sciences Kiel	
Status within the curriculum	Master Course Wind Engineering	
	elective course	
Language	English	
Type of course and hours	short introduction with large amounts of practice (2)	
per week		
Student workload	attendance: 60 h	
	private study: 90 h	
Credit points	5 ECTS	
Preconditions according to	Sound Knowledge of Wind Turbine Aerodynamics, helpful: basic	
examination regulations	knowledge of Linux, C++	
Aims of the module,	The module is an introduction to CFD. The students will learn	
acquired skills	how to use CFD and how to apply it to wind turbine	
	aerodynamics	
	Additionally the students will get to know and learn how to use	
	OpenFOAM and other open source codes	
Subjects covered	What is CFD?	
	Understanding and working with Linux and C++	
	Understanding and working with OpenFOAM	
	Meshing, Solving, Post-Processing	
	Solving Problem 1: laminar and turbulent flat-plate boundary	
	layer	
	Solving Pr. 2: 2D Wind Turbine Airfoil DU-W-300-mod	
	Solving Pr. 3: Actuator Disk-Model of the MEXICO Rotor	
	Solving Pr. 4: Full 3D Wind Turbine Wing (Mexico)	
Form of examination	Oral examination	
Media used	PC, power point presentation

Module number [25]: Modelling & Simulation of Wind Turbines

Course	Master of Science – Wind Engineering		
Module name	Modelling & Simulation of Wind Turbines		
Abbreviation (if applicable)	MaS		
Subtitle (if applicable)	Modelling wind turbines in a commonly used simulation		
	environment for simulating the general behaviour of wind turbines		
	during normal operation		
Seminar (if applicable)	seminar		
Semester	Winter semester		
Person in charge of module	Prof. Dr. Clemens Jauch, Flensburg University of Applied Sciences		
Lecturer/s	Prof. Dr. Clemens Jauch, Flensburg University of Applied Sciences		
Status within the	Master Course Wind Engineering		
curriculum	elective course		
Language	English		
Type of course and hours	2 h lectures		
per week	2 h laboratory exercise		
Student workload	attendance: 60 h		
	private study:90 h		
Credit points	5 ECTS		
Preconditions according to	General knowledge in undergraduate mathematics, general ability		
examination regulations	to use computers, basic experience in the use of engineering		
	software		
Aims of the module,	The students learn the general functionality of a wind turbine		
acquired skills	system: The interrelation between wind speed, pitch angle,		
	rotor speed, torque and power in a wind turbine are discussed		
	to the extent so the students can apply this knowledge in the		
	laboratory		
	The lab exercise comprises modelling a general wind turbine waters with the simulation to all Matlah (Simulation).		
	system with the simulation tool Matlab/Simulink.		
	Goal of the lab exercise is a running simulation model in Matlab (Simulation that reproduces the manages of a wind		
	Matlab/Simulink that reproduces the response of a wind		
	turbine in terms of pitch angle, rotor speed, torque and power,		
	when subject to variations in the wind speed and variations in grid quantities		
Subjects covered	An Introduction to Modelling and Simulation		
Jubjects tovered	Fields of Application and Advantages of Modelling and		
	Simulation		
	Simulation Simulation Environments for Engineering		
	Time-Invariant and Time-Variant Systems		
	Linear and Non-Linear Systems		
	Differential Equations		
	Numerical Integration		
	 Block Diagram Representation Transfer Functions and State Space Approach 		
	Per Unit Representation		
	•		
	Initialisation Anti Mindun of Integrators		
	Anti-Windup of Integrators Lealure Function		
	Lookup Function		

	Modelling Wind Turbines Models of Wind Turbine Subsystems Wind Model Aerodynamics Drive Train Tower Generator and Converter Control System Interface to Power System Block Diagrams of Different Wind Turbine Systems
Form of examination	Written examination (120 minutes)
Media used	Beamer based presentation, blackboard, computer laboratory with Matlab/Simulink software
Recommended literature	Documentations and examples on the Matlab homepage http://www.mathworks.de/support/

Module number [26]: Turbine Measurements

Course	Master of Science – Wind Engineering		
Module name	Turbine Measurements		
Abbreviation (if applicable)	Meas		
Subtitle (if applicable)			
Seminar (if applicable)			
Semester	Winter semester		
Person in charge of module	Marko Ibsch,DNV GL		
Lecturer/s	Management Team of GL Garrad Hassan Deutschland		
Status within the curriculum	Master Course Wind Engineering		
	elective course		
Language	English		
Type of course and hours	4 h lecture		
per week			
Student workload	attendance: 60 h		
	private study: 90 h		
Credit points	5ECTS		
Preconditions according to	Basics in wind energy theory		
examination regulations	Basics in wind turbine systems		
Aims of the module,	Knowledge and understanding of general items about the		
acquired skills	respective standards and the different types of measurements		
	Characteristics of wind turbines		
	Market relevance		
	Possibility to learn from the experience of the lecturers, who		
	come from one of the leading testing companies worldwide		
Subjects covered	General overview		
	Standards and Guidelines for Turbine Measurements		
	Prototype testing		
	Power Performance		
	• Loads		
	Acoustics		
	Power Quality		
	Test of Turbine Behavior		
Form of examination	Written examination (120 min)		
Media used	Power Point Presentations		
Recommended literature	Wind Turbines - Fundamentals, Technologies, Application,		
	Economics - 2nd edition		
	E Hau		
	Springer 2006		
	Hardcover XVIII, 783 p. 552 illus ISBN 3540242406		
	Wind Power Plants - Fundamentals, Design, Construction and		
	Operation

Module number [27]: Controller Design for Wind Turbines and Wind Farms

Course	Master of Science – Wind Engineering		
Module name	Controller Design for Wind Turbines and Wind Farms		
Abbreviation (if applicable)	CWT		
Subtitle (if applicable)	Design and evaluation of basic feedback and feedforward control		
	loops for wind turbines. Overview on wind farm control.		
Seminar (if applicable)	seminar		
Semester	winter semester		
Person in charge of module	Prof. DrIng. David Schlipf, HS Flensburg		
Lecturer/s	Prof. DrIng. David Schlipf, HS Flensburg		
Status within the	Master Course Wind Engineering		
curriculum	elective course		
Language	English		
Type of course and hours	2 h lectures		
per week	2 h laboratory exercise		
Student workload	attendance: 60h		
	private study: 90h		
Credit points	5 ECTS		
Preconditions according to	General basic knowledge in Matlab, undergraduate mathematics		
examination regulations	and mechanics		
Aims of the module,	The students are able to describe the basic dynamics of wind		
acquired skills	turbines.		
	The students are able to design a basic controller, basic filters		
	and additional control loops for wind turbines and test and		
	evaluate them in Matlab/Simulink.		
	The students are able to process lidar data and use them for		
	feedforward control.		
	The students are able to reproduce the challenges in wind farm		
	control and to explain basic wind farm control approaches.		
Subjects covered	Controller design model		
	Baseline pitch and torque control		
	Additional control loops and filter design		
	Individual pitch control and other concepts		
	Lidar-assisted control		
	Wind farm control		
	Floating wind turbine Control		
Form of examination	Individual oral exam (30 min)		
Media used	Beamer based presentation, blackboard, computer laboratory with		
	Matlab/Simulink software		
Recommended literature	T. Burton, N. Jenkins, D. Sharpe, and E. Bossanyi, Wind Energy

Module number [28]: Wind Engineering Challenge Project

Course	Master of Science – Wind Engineering		
Module name	Wind Energy Challenge Project		
Abbreviation (if applicable)	WEP		
Subtitle (if applicable)	. a) Mechanical & Electrical Engineering 🔙		
	. b) System Design (Modeling & Optimization)		
	. c) Physical Prototyping 🔛		
	. d) Project Management 🔛		
Seminar (if applicable)	project		
Semester	Winter semester		
Person in charge of module	Prof. Dr. Torsten Faber, Kai Mommsen, University of applied sciences		
	Flensburg		
Lecturer/s	Kai Mommsen		
Status within the curriculum	optional		
Language Type of source and hours	English		
Type of course and hours per week	Individual: 2h project discussion, 2h project work		
Student workload	Attendance: 60h		
	Private study: 90h		
Credit points	5 ECTS		
Preconditions according to	None, but recommended:		
examination regulations	- handcraft skills		
	interest in researchcreativity in engineering		
Aims of the module,	Acquire practical research, developing and manufacturing experience		
acquired skills	by participating in a wind-specific engineering competition or challenge		
Subjects covered	Design Theory		
	 Practical aerodynamic design (Rotor design tradeoffs, surface 		
	finish effects, fairing design, manufacturing) 🔙		
	Project-specific theory (e.g. competition)		
	Virtual Prototyping 🔛		
	CFD: 2D boundary layer code (XFoil), 3D panel method		
	(XFLR5), and rotor BEM (QBlade)		
	Performance Modeling		
	Numerical Optimization		
	Physical Prototyping 🔛		
	Geometric Dimensioning and Tolerancing (GD&T)		
	Hot wire cutting, 3D printing		
	Measurement [sep]		
	System characterization (Friction, Drag, etc.) [se]		

	Wind tunnel testing
	Site assessment [stp]
	Performance measurement [stp]
	Optional: telemetry
Form of examination	Periodic design reviews (33%), simulation report (33%), physical prototype (34%)
Media used	n/a
Software	Eventually:
	- Microsoft Excel
	- Matlab
	- QBlade
	- Solid Works
	- openFoam (linux Based)
	- BEM Code

Module number [29]: Green Entrepreneurship

Course	Master of Science – Wind Engineering
Module name	Green Entrepreneurship
Abbreviation (if applicable)	
Subtitle (if applicable)	
Seminar (if applicable)	
Semester	Winter Semester
Person in charge of module	Thomas Neumann
Lecturer/s	Thomas Neumann
Status within the curriculum	Master Course Wind Engineering elective course
Language	English
Type of course and hours	4 h lectures, workshops & meetings
per week	
Student workload	Attendance: 45 h
	Private study: 105 h
Credit points	5 ECTS
Preconditions according to	Sound knowledge of business administration and accounting
examination regulations	
Aims of the module,	Students should learn how to start a business and to judge
acquired skills	foundations of enterprises of others
	Students learn how to identify new business ideas and to
	conceptualize, to plan, to finance and to manage them successfully
	Competencies covered:
	ability to think entrepreneurial
	ability to act strategically
	problem solving competence
	ability to act target-oriented
	ability to deal constructively with criticism
	interdisciplinary knowledge
	interdisciplinary communication
	economic competence
	ecological competence
	methodical competence
	social and ethical sense of responsibility
	self-organization
	project organizing skills
	ability for project organization
	ability to deal constructively with criticism
	collaborative skills
	teamwork skills
Subjects covered	This unit introduces the students to the field of entrepreneurship and
_	planning for new business initiatives in the global business
	environment. The focus of the course are green business foundations
	and how to harvest green opportunities. Topics include:
	Entrepreneurial theory
	Idea generation techniques
	Value proposition, customer definition and market analysis
	Key resources, activities and partnerships required
	Cost structure, revenue models and financing strategies
L	1 222 00. 2002. 07. 0. 0. 0. 0. 0. 0. 0. 0. 0. 0. 0. 0. 0.

	 Vision, mission and strategy development Basics of business plan writing Pitch-presentation workshop The focus of the course are green business foundations and how to harvest green opportunities.
Form of examination	Oral exam / team project presentation (pitch) Project paper (business plan)
Media used	Power point, blackboard, business model canvas, internet
Recommended literature	 Arend, C., Dietrich, M., Maass, D., Pärschke, L. Module number [30]: Master thesis

Course	Master of Science – Wind Engineering,
Module name	Master thesis
	Master triesis
Abbreviation (if applicable)	-
Subtitle (if applicable)	-
Seminar (if applicable)	- th
Semester	4 th semester (or 3 rd for students having been registered for the 2nd semester of the programme immediately)
Person in charge of module	2 professors of the course of study
Lecturer/s	-
Status within the curriculum	Master Course Wind Engineering
	mandatory course
Language	English, German (if an application is filed accordingly)
Type of course and hours	Writing of final thesis
per week	Preparation and realisation of colloquium
per week	·
Chindren in a sililar al	The thesis is to be produced in a time period of five months.
Student workload	attendance: -
	private study: 900 h
Credit points	30 ECTS
Preconditions according to	For students having been registered for the 2nd semester of the
examination regulations	programme immediately, pursuing the programme as a three-
	semester course of study, a minimum of 45 credit points (CP) is the
	prerequisite for admission to the thesis. For students having started
	with the first semester of the programme, pursuing the programme
	as a four-semester course of study, a minimum of 75 credit points
	(CP) is the prerequisite for admission to the thesis.
Aims of the module,	With the Master's thesis the students show that they are able
acquired skills	to independently compose a comprehensive work that
	complies with high methodological, conceptual and scientific
	demands.
	They are also able to present the results in written and oral
	form.
Subjects covered	The topic of the thesis has to be related to one of the taken
-	modules of the study and has to be supervised by at least one
	professor of the study program. Subjects covered:
	Conception of a work plan
	Independent study of related literature and methodology
	Application of methodology
	Compilation of the thesis
	Presentation of results
Form of overmination	Colloquium The colloquium is schoduled to take 60 minutes for each candidate.
Form of examination	The colloquium is scheduled to take 60 minutes for each candidate.
	The grade of the master's thesis is made up of the grade for the
	written thesis counting 70% and the grade for the colloquium
Advilla vid	counting 30%.
