01.10. Technical traceability and commercial transparency in Operation & Maintenance on large wind farms

Production guarantees and contractual availability are standard requirements in the global wind business today.

To reduce operation and maintenance costs over the entire lifecycle of wind turbines in large farms has lifted the awareness and importance of service operation. Wind turbines sales becomes a commodity business and turbine prices are permanent under-price pressure.

The price for services will most likely come under pressure next. Vestas is operating the largest global wind turbine fleet which is a huge potential for long-term profitability.

This presentation will introduce new technologies to execute wind turbine service more efficiently and predictably.

Wolfgang Jussen, Vice President Service Lifecycle Management, Vestas Wind Systems
